NAB Post + Attendees to Experience Globalstor's High Definition DI Solution Showcased By PNY Technologies

NEW YORK, NY (November 15, 2005) - Globalstor Data Corporation announced today that the *ExtremeStor-DI* will be showcased in the PNY Technologies booth (#542) during this year's NAB Post + tradeshow and exhibition being held at the Javits Convention Center in New York, November 15-17. A high performance film and HD production solution the ExtremeStor-DI empowers creative professionals to work more productively with even greater film production control in a streamlined DI workflow environment.

Incorporating 24, 250GB hot-swappable SATA hard drives for up to 6TB of local storage or 24, 400GB hot-swappable SATA hard drives for up to 9.6TB, ExtremeStor-DI provides filmmakers and post houses with exceptional post-production capabilities. Paired with the NVIDIA Quadro FX 4500 by PNY Technologies graphics board, ExtremeStor-DI is a fault-tolerant high definition DI solution providing real-time playback at HD and 2K resolutions as well as offering a complete end-to-end pipeline connecting the filmmaking process from production through DI post production. ExtremeStor-DI will also showcase the rich features of the system's optional SCRATCH™ Data-Centric Workflow Solution for HD and 2K film post production from ASSIMILATE™. SCRATCH enables data management for the myriad project files and real-time, multi-resolution review/ playback, assemble/edit, conform, primary color correction, scratch audio, visual effects, and final mastering to film. Bundled with Windows XP pro, this DI solution can alternatively be configured with either Windows 2003 or Linux. Featuring dual Intel Xeon processors with 2GB of RAM, ExtremeStor-DI writes at a sustained data rate in excess of 350 MB/Sec and plays back/reads in excess of 1000 MB/Sec. under RAID 5. The result is a powerful, integrated, streamlined DI workflow environment that enables increased productivity and even greater control at the final stages of film production.
